

The Rule's attribute event in the source model is transformed into an Event:type of the target model. In this case attribute is mapped to an entity with an attribute. The Event Type of a Rule in the target model is determined by the Rule type:

- Event Type of a Precondition Rule is *ActivityPrepared*;
- Event Type of a Postcondition Rule is *ActivityPrepared*

Event Type of a TimeRestriction Rule *TermActivity*

The Rule's attribute condition in the source model is transformed into a Condition:expression in the target model. In this case, an attribute is mapped into an entity with an attribute

The Rule:action in the source model is transformed in an Action:type in the target model. The attribute action is mapped to an entity with an attribute. In the target model an action is executed according to the rule condition value (true/false)

The Rule:action in the source model is transformed in an Action:type in the target model. The attribute action is mapped to an entity with an attribute. In the target model an action is executed according to the rule condition value (true/false)
